

CHOOSING ELECTRIC FLIGHT POWER SYSTEM FOR GLOW AIRCRAFT WRAM SEMINAR 2006

- **Choose the Mission**
 - **Trainer**
 - **Sport**
 - **Sport aerobatic**
 - **Aggressive aerobatic**
 - **scale**
 - **3D**

- **Choose the power loading (watts/lb)**
 - **Trainer 40-50**
 - **Sport 50-60**
 - **Sport aerobatic 60-80**
 - **Aggressive aerobatic 80-100**
 - **Scale 50-100**
 - **3D 100+**

- **Estimate weight of model**
 - **Li-poly battery..... same or only slightly more than glow weight**

- **NiCd/NiMh.... 1/2 lb more for 20-30 glow, 1 lb more for 40 glow, 2 lbs more for 60 glow**
- **Compute watts required**
 - **Power loading(Watts/lb) X weight (lbs)**
- **Compute voltage**
 - **Watts ÷ 20 amps (.15-.25 glow)**
 - **Watts ÷ 30 amps (.30-.60 glow)**
 - **Watts ÷ 40 amps (.90-1.20 glow)**
- **Determine battery needs**
 - **Use 1.0 v/cell for NiCd/NiMh chemistry up to 40 amps**
 - **Use 3.7 v/cell for li-poly chemistry up to 20 amps**
 - **Use 3.5 v/cell for li-poly chemistry up to 40 amps.**
- **Choose propeller (Pitch/Diameter (P/D)ratio)**
 - **Trainer (.4-.6)**
 - **Sport (.5-.7)**
 - **aerobatic (.6-.75)**
 - **scale (depends on drag)**
 - **WW1/Golden age .4-.6**
 - **WW2 fighter .6-.75**
 - **WW2 bomber .5-.6**

- **General Aviation WW2-Present (.5-.75)**
 - **3D (.4-.5)**
 - **Racer (.9-1.2)**
- **Choose propeller (all except racers)**
 - **Measure propeller clearance**
 - **With model level, measure from centerline of prop shaft to ground.**
 - **Subtract 1-1.5"**
 - **Multiply by 2 to get maximum diameter permissible.**
 - **Multiply by P/D ratio to get pitch.**
 - **Search through motor manufacturers for motor that will deliver the required watts (amps x volts) using the battery size (voltage), swinging the chosen prop.**
- **REMEMBER!**
 - **Size does matter!**
 - **Big motors and big props for big models!**
 - **It is better to underutilize a big motor than overburden a small motor!**

CHOOSING ELECTRIC FLIGHT POWER SYSTEM FOR GLOW AIRCRAFT

Example 3D-Aerobatic

- **Choose the mission = aerobatic-aggressive**
 - **Giles 3D**
(www.giantscaleplanes.com)

- **Choose the power loading (watts/lb)**
 - **Aerobatic-aggressive = 80-100 (use 100)**

- **Estimate weight of model – li-poly cells**
 - **Same as for 40 glow = 5 LBS**

- **Compute watts required**
 - **Power loading(Watts/lb) x weight (lbs)=
 $100 \times 5 = \underline{500 \text{ watts}}$**

- **Compute voltage**
 - **Watts \div 30 amps (.30-.60 glow)=
 $500 \div 30 = \underline{16.67 \text{ Volts}}$**

- **Determine battery needs**
 - **Use 3.5 v/cell for li-poly chemistry up to 40 amps**
 - **= approx 5 cells**

- **Choose propeller (Pitch/Diameter (P/D)ratio)**

- **aerobatic (.6-.75) use .7**
- **Choose propeller (all except racers)**
 - **Measure propeller clearance**
 - **With model level, measure from centerline of prop shaft to ground = 8.5"**
 - **Subtract 1-1.5" (use 1.5) = 7.0"**
 - **Multiply by 2 to get maximum diameter permissible = 14" diameter**
 - **Multiply by P/D ratio (.7) to get pitch = 10" of pitch**
 - **Search through motor manufacturers for motor that will deliver the required watts (amps x volts) using the battery size (voltage), swinging the chosen prop.**

**Axi 4130/16 would be a good choice
Possibly the new Eflite BL60 outrunner
(unconfirmed)**

CHOOSING ELECTRIC FLIGHT POWER SYSTEM FOR GLOW AIRCRAFT

Example - 40 size trainer

- **Choose the mission = Trainer/sport**
 - **Hobby Lobby Telemaster 40**
- **Choose the power loading (watts/lb)**
 - **Trainer = 40-50 (use 50)**
- **Estimate weight of model - NIMH cells**
 - **1 lb more for 40 glow = 7 LBS**
- **Compute watts required**
 - **Power loading(Watts/lb) x weight (lbs)=
50 x 7 = 350 watts**
- **Compute voltage**
 - **Watts ÷ 30 amps (.30-.60 glow)=
350÷30= 11.66 Volts**
- **Determine battery needs**
 - **Use 1.0 v/cell for NiCd/NiMh = approx
12 cells**
- **Choose propeller (Pitch/Diameter (P/D)ratio)**
 - **Trainer (.4-.6) use .5**

- **Choose propeller (all except racers)**
 - **Measure propeller clearance**
 - **With model level, measure from centerline of prop shaft to ground = 8"**
 - **Subtract 1-1.5" (use 1.5) = 6.5"**
 - **Multiply by 2 to get maximum diameter permissible = 13" diameter**
 - **Multiply by P/D ratio to get pitch = 6.5" of pitch**
 - **Search through motor manufacturers for motor that will deliver the required watts (amps x volts) using the battery size (voltage), swinging the chosen prop.**

Axi 2826/12 would be a good choice

**Possibly the new Eflite BL46 outrunner
(unconfirmed)**
